

Ex11: Building your Deep Neural Network Step by Step

In this assignment, you will build a multi-layer deep neural network.

You will learn to

- Use non-linear units like ReLU to improve your model
- Build a deeper neural network (with more than 1 hidden layer)
- Implement an easy-to-use neural network class

Instructions:

- **Fill in the code blocks of Python script `ex11.py` that are marked with `### START CODE HERE ###` and `### END CODE HERE ###`.** The detailed instructions are specified as comments in `ex11.py`.
- Do not use loops (for/while) in your code, unless the instructions explicitly ask you to do so.
